## EXPERIENCE

**Frontend Software Engineer**                                                          Feb 2021 – present
*Trivago*                                                                              *Dusseldorf, Germany*

- Led the implementation of several high performing features for millions of users using React, TypeScript and GraphQL.
- Prepared technical design documents for complex features on the core metasearch offering.

**Frontend Engineer**                                                                   Jan 2020 – Feb 2021
*SuperFluid*                                                                           *Tallinn, Estonia / UK*

- Developed the user dashboard for a web3 crypto streaming platform using React and NextJS.
- Worked on the company's google chrome extension and optimized performance by 23%.

**Frontend Engineer**                                                                   Aug 2019 – Jan 2021
*RocketBC*                                                                                     *Hong Kong*

- Led the implementation of the frontend for a DeFi yield farming feature of a web application using Vue JS.
- Built a blockchain powered guessing game linked to MetaMask wallet for staking and collecting rewards.

**Software Engineer**                                                                    Feb 2019 – Jul 2019
*Andela*                                                                                           *Lagos*

- Improved accessibility and SEO issues by up to 41% using Chrome Audit and Page Insight tools.
- Created multiple REST API endpoints for performing complex CRUD operations using NodeJs, Express and PostgreSQL.
- Implemented extensive unit and end to end tests using Jest, Enzyme and Cypress.
- Setup CI/CD pipelines to ensure projects were of the highest standards by implementing GitHub PR checks for test coverage using tools like Travis CI and codecov.

**Full Stack Web Developer**                                                             Jan 2018 – Jan 2019
*Signal Alliance*                                                                                  *Lagos*

- Developed a full stack Ecommerce web application using C#, ASP.NET MVC, HTML and CSS
- Explored ways to implement blockchain technology into the company's processes
